

Drafting in 3 dimensions unveils solutions never possible with conventional 2D drafting.

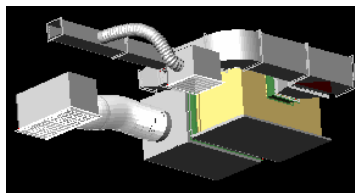

As well as conventional 2D drafting, Draftech now provides 3D drafting solutions but maintains typical 2D layouts to comply with current standards.

- 3 dimensional models easily pick out problem areas, not visible in 2D drawings, and results in greater accuracy
- Greater accuracy helps to avoid costly mistakes and variation costs

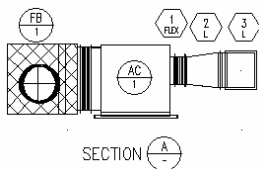

- Navigation through drawing models allows designers and clients a clear view of projects before installation

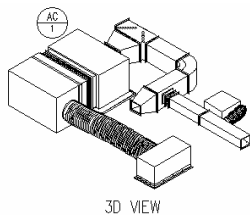

- Realistic rendering can be used for exposed areas where aesthetics is important. This can be done on a standard PC with minimal effort

- Walk-throughs can be recorded as videos for presentations
- Plantrooms are much easier to design and interpret. This saves on expensive delays and variations
- Co-ordination problems with other services can be identified well before installation
- New software developments allow better co-ordination with architectural models
- New Building Information Modelling (BIM) advances reduces costs when building and services are modified

Why bother with 3D Drafting?

- Sections and elevations are generated automatically which eliminates time consuming detailing

- 3 dimensional views allow for quick interpretation
